# 16   Calculate Interest

```c
#include <stdio.h>

int main() {

int principal, rate, time, interest;

printf("Enter principal, rate, time: ");

scanf("%d * %d * %d / 100", &principal, &rate, &time);

interest = (principal *rate* time)/100;

printf("Interest = %d\n", interest);
return 0;

}
```
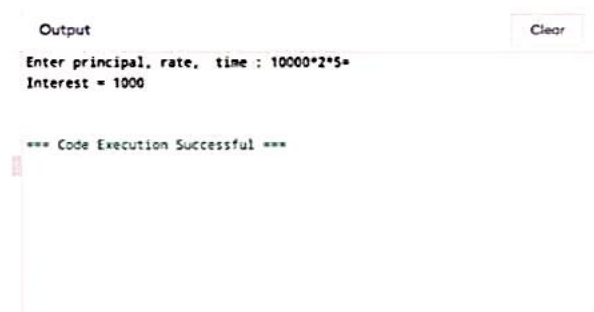

```
Output                                    Clear

Enter principal, rate, time : 10000*2*5=
Interest = 1000

=== Code Execution Successful ===
```
